

Tobacco-related death is the leading cause of preventable death in the United States. Each year over 400,000 people die from tobacco-related causes, including 50,000 people who have never used tobacco. The primary goals of the Tobacco-Free DU initiative are to 1) eliminate exposure to secondhand smoke and tobacco use in general, which is known to cause cancer, and 2) to aid tobacco users who want to quit with on-campus and off-campus resources.

By signing this endorsement form, I/we are supporting for a Tobacco-Free DU, meaning tobacco products could not be used on common and educational grounds of the university where they affect the health and lives of all community members exposed.
