Molecular and Cellular Biophysics Symposium at the University of Denver

We would like to announce the 2nd annual symposium on Molecular and Cellular Biophysics at the University of Denver. The symposium will be a one-day meeting that will include two keynote speakers, several 30-minute talks from regional speakers, and a poster presentation session. The two keynote speakers for 2012 are Prof Robert Phillips (Caltech) and Prof Sandy L. Schmid (UT Southwestern Medical School). The symposium will take place on April 19th, 2012.

The 2011 MCB symposium attracted 138 biophysicists from several regional institutions including DU, the University of Colorado (at Boulder, at Denver, and at Anschutz Medical Campus), Colorado State University, the University of Wyoming, Montana State University, and the National Renewable Energy Laboratory. For more information about the MCB program and the past symposium, access <http://www.du.edu/nsm/departments/molecularandcellular/symposium.html>.

Please save the date and encourage your colleagues and students to attend the meeting. Details of the meeting with the final list of speakers will follow soon.
