

"With 44 of the world's top *Tamarisk* researchers, Drs. Anna Sher and Martin Quigley have assembled the first comprehensive book on this important woody genus in the western United States. This tremendously valuable book is a must have for all who study or manage *Tamarix*." -- Mike Dombeck, Chief Emeritus, U.S. Forest Service.

A Case Study of Ecological Change in the American West Edited by Anna Sher and Martin F. Quigley Congratulations!

Anna Sher has been investigating the ecology of tamarisk trees since 1993 and on two continents. She is a biology professor at the University of Denver, where her lab is currently focused on restoration of riparian ecosystems and plant communities that arise after the removal of *Tamarix*.

Martin F. Quigley is a plant ecologist and licensed landscape architect. He is the Kurtz Professor of Botany at the University of Denver, where he teaches Conservation Biology, Ethnobotany, Ecology, and Restoration Ecology.
